

Advertisement for four fully-funded postdoctoral positions (rolling advertisement)

Applications are invited from strongly motivated candidates with excellent academic credentials for Postdoctoral (Research Associate) positions in a multi-departmental DRDO-sponsored research project. IIT Hyderabad is aiming to create a multi-disciplinary team of students and post-docs to work in the broad area of melt-spinning of polymeric jets/fibers. Candidates looking to work in a collaborative environment in a multidisciplinary area should find this project appealing.

Title of the Project	Modelling and establishment of various process parameters for PCS fibers and modelling of PCS-SiC conversion process
Project PIs	Dr. Harish N Dixit (MAE), Dr. Satyavrata Samavedi (CHE), Dr. Balaji Iyer (CHE), Dr. Lakshmana dora Chandrala (MAE), Dr. Alan Jacob (CHE), Dr. Mahesh Ganesan (CHE), Dr. Prakhar Gupta (MAE)
Departments	Mechanical and Aerospace Engineering, and Chemical Engineering
Post	Research Associate or Postdoctoral Fellow
Fellowship	Rs. 58,000/- per month + 24% HRA
Posts	4
Tenure	Initially for a period of one year, and extendable for an additional two years based on performance

Application Process:

Eligible applicants should apply by filling their details in the Google Form on or before 28th February 2024. No email applications will be accepted. If you have any questions before filling the form, send an email to melt.spin@mae.iith.ac.in

Selection:

- This is a rolling advertisement; the PIs will evaluate and shortlist the applications received every 15 days until suitable candidates are selected.
- Candidates will be shortlisted based on their academic record/achievements and only shortlisted candidates will be intimated via email for an online interview with the selection committee.
- Joining will be immediate after selection.
- Please note that merely meeting the minimum criteria does not guarantee a call for an interview. The position will be left vacant if no suitable candidate is found.

Description of the positions:

Postdoc Positions - 1,2: Conduct melt-spinning experiments with *in situ* visualization and rheological characterization

We are looking to hire two RAs for the above task who will work collaboratively in developing a melt-spinning setup, conduct melt spinning experiments and make rheological measurements. The data generated in this role will be used by other RAs and PIs for developing melt rheology models and CFD validation.

Qualifications: Candidate should have a PhD in Chemical Engineering/Mechanical Engineering/Applied Mechanics/Physics/Polymer engineering and allied areas. Candidates who have submitted their thesis and are awaiting defense can also apply.

Required Skills: Experience with building experimental setup, familiarity with experimental flow visualization and/or hands-on experience with polymer rheology and characterization (DSC, TGA, etc.).

Desirable: Experience with fabrication, experience with image processing, familiarity with polymer rheology, fiber spinning technologies, knowledge of CAD.

Postdoc Position - 3: Develop molecular constitutive relations for polymer melt rheology

We are looking to hire one RA for this task who will work collaboratively in developing molecular constitutive models and conduct simulations of curing/pyrolysis. The RA will work closely with the rheology team and melt-spinning team and provide the theoretical support for the project.

Qualification: Candidate should have a PhD in Chemical/Mechanical Engineering/Applied Mechanics/Physics and allied areas. Candidates who have submitted their thesis and are awaiting defense can also apply.

Required Skills: Experience with multiscale and multiphysics simulation, experience with handling parallelized C and python codes. Candidates with a proven track record of developing their own C and Python codes are particularly encouraged to apply.

Desirable: An understanding of the theoretical underpinnings of rheology, DSC and GPC.

Postdoc Position - 4: Conduct CFD simulations and develop 1D theoretical models

We are looking to hire one RA for this task who will work collaboratively in developing CFD and 1D models of single and multi-nozzle fiber spinning, and actively collaborate with the rheology team and melt-spinning team to validate and improve the model.

Qualifications: Candidate should have a PhD in Chemical Engineering/Mechanical Engineering/Applied Mechanics/Physics. Candidates who have submitted their thesis and are awaiting defense can also apply.

Required Skills: Experience with developing CFD codes, preferably multiphase codes, or experience in running opensource CFD codes such as OpenFOAM, Basilisk, etc, and strong foundations in fluid mechanics

Desirable: Knowledge of two-phase flow simulations, Matlab and/or Python.
